

## Instructions on how to use the template line discipline artwork

- Crop the supplied 5 metre x 2 metre (16' 4" x 6' 6") design template to the required size with the necessary bleed. **Do not re size the document after cropping as this will distort the preset line disciplines.** The template as standard contains 7 layers (Design, White, White, Black, White, White, Design). Please delete layers where necessary, for example leaving only Design, White and Black (CVA1) depending on opacity of white ink. Please note that within the nominated RIP software the white layer needs to be printed white - magenta is used for visual purposes only.
- Import the artwork into the document. If the file is an existing Adobe® Illustrator® document it can be opened separately and the content copied (Edit>Copy) and pasted (Edit>Paste) into the design layer of the document that contains the white mask layer lines. Alternatively the artwork may be placed depending on the file type (File>Place). The imported artwork should be grouped (Object>Group) and then sent to the back (Object>Arrange>Send to Back) so that it appears behind the white mask layer lines. Please note that within the nominated RIP software the white mask layer lines need to be transparent.
